

ARINJAY BHOLA

Software Developer

+91 8929134746 | arinjay26bhola@gmail.com | arinjay.dev | [GitHub](https://github.com/arinjay26) | [LinkedIn](https://www.linkedin.com/in/arinjay26)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, SQL, Python

Frontend: React, Next.js, React Native, Tailwind CSS

Backend & APIs: Node.js, Express, Hono, REST, tRPC

Databases & Caching: PostgreSQL, MongoDB, Redis

AI / LLM Systems: OCR, Vector Embeddings, RAG Pipelines, LLM API Integration (OpenAI, Anthropic, Gemini)

DevOps & Tools: Docker, Git, Vercel, Cloudflare Workers

WORK HISTORY

Full Stack Developer Intern, Pan Earth Pvt. Ltd., Delhi

Jan 2026 – July 2026

- Conceived, architected, and independently shipped an **end-to-end ERP-style expense management platform**, replacing a manual, paper-based process and **cutting reimbursement turnaround time by nearly 80%** (2 weeks to 3 days), directly boosting employee productivity across the organization.
- Own the **full product lifecycle as the sole engineer**, architecting cross-platform Next.js and React Native clients on a serverless backend that powers daily workflows, from system design through deployment and iteration.
- Re-engineered backend infrastructure by migrating to **Hono and Cloudflare Workers**, slashing average API response time from 1-2 seconds to 400-500ms, a **roughly 70% latency reduction** that made the app feel instantaneous to end users.
- Engineered a **granular, role-based authentication system** spanning 3 distinct user roles (admin, manager, employee), safeguarding sensitive financial data and enforcing scoped access across both platforms.

Full Stack Developer Intern, Mittal Gupta and Co. (Remote)

Aug 2025 – Oct 2025

- Architected a **unified full-stack dashboard** that consolidated multiple backend APIs into a single interface, giving several distinct user groups secure, role-aware access to their data.
- Built a **complete role-based authentication system from scratch**, bridging frontend flows with protected backend routes and closing critical gaps in unauthorized-access handling.
- Designed **relational database schemas** to support secure, structured handling of sensitive client data end to end.

Full Stack Developer Intern, Ginete Technologies Pvt. Ltd., Noida

May 2025 – Aug 2025

- Built and delivered **domain-specific full-stack applications**, including internal HR tools and business workflow platforms, translating real operational needs into production-grade software for direct clients.
- Designed **RESTful APIs, database schemas, and document-handling pipelines** using React, Next.js, Node.js, and PostgreSQL, enabling seamless file uploads, data extraction, and role-based access.
- Owned **end-to-end development and deployment**, working directly with clients to translate business processes into production-ready systems.

PROJECTS

DocChat | [GitHub](https://github.com/arinjay26/docchat) | [Live](https://live.docchat.dev) — Next.js, TypeScript, Tesseract OCR, Gemini Embeddings, Pinecone, LangChain, NextAuth

- Architected an end-to-end document ingestion pipeline supporting PDF, Word, Excel, and image inputs, with Tesseract OCR text extraction for scanned documents.
- Implemented semantic indexing by chunking extracted text and generating vector embeddings via Gemini AI (text-embedding-004) for similarity search.
- Built a RAG pipeline on Pinecone to retrieve top-K relevant chunks by vector similarity, powering context-aware LLM responses grounded in the source document.

AI-LMS | [GitHub](https://github.com/arinjay26/ai-lms) | [Live](https://live.ai-lms.dev) — Next.js, TypeScript, Clerk, Drizzle, PostgreSQL, Redux, Gemini, Inngest

- Architected a full-stack LMS with authenticated user flows, course/lesson management, and progress tracking using Next.js, Clerk, PostgreSQL, and Drizzle ORM.
- Integrated AI-assisted content generation and recommendations via the Gemini API, offloading long-running workflows to event-driven background jobs with Inngest.
- Built a state-driven, responsive frontend with Redux, Tailwind CSS, and shadcn/ui, supporting complex client-side interactions without blocking the UI.

Task Management App | [GitHub](https://github.com/arinjay26/task-management-app) | [Live](https://live.task-management-app.dev) — React, Node.js, Tailwind, JWT, Prisma, Hono

- Developed a scalable task management application with role-based access control for user and admin roles.
- Built a serverless backend on Cloudflare Workers for low-latency performance at the edge.
- Implemented secure authentication and authorization end to end using JWT.

EDUCATION

B.Tech in Computer Science, The NorthCap University, Gurgaon

June 2026
